Der Franzose

Dear „Franzosen“ fans, such is life:

I'm sitting peacefully in my garage, my DS is in my back, the Peugeot 204 Cabrio on the lifting ramp, is longing for an oil change. Contrary to the weather forecast, the sun is shining....actually it is great but on the other side, I have to help in the garden, sweeping all the leaves outside!
In that moment, I see my wife and the dog coming in. I'm suspecting something bad... instruction for the gardening?!

I switch off the music as in that moment I could noticed some tears running down her eyes. She has toothache! I take her in my arm and whisper to her „ darling, don't worry about that. Come in and take a seat. I'll get this sorted out.“

I tie her with some cable straps on the chair and turn on „AC/DC“ quite loud. Using a rubber mallet, I hit her on her head and she fainted! First step - checked!

Using a mole grip, I fix her mouth to be kept opened for me to have a better view on this dilemma. Alright... overthere on the left side completely at the back, that does not look good at all. I have to get this evildoer out of her mouth. I need some tools - precision mechanics, small drilling machine, pointed pliers and the good scalpel which I used to cut the DS carpet.

While drilling in that tooth, I slip and hurt the gingival...OMG! I grab the suction gun and absorb the bleeding point. I notice that through this operation, I have not only hurt her palate but I hit the wrong tooth.

Anyway, that bad tooth has to be removed. I grab to the universal pliers...it goes on amazingly quite smoothly with that tool after having cleaned up all the anti-friction bearing grease. And here it is!

Actually, while pulling the tooth out, I hurt myself. If I was well prepared, I would have put on my gloves. I, suddenly hear my wife breathing stertorously.... MY goodness, she is awake! I didn't even notice it.

Anyway, she can't speak because of the mole grip and can't make any moves neither. Thank the cable straps, she was firmly tied . As I was not really finished with the operation, I hit her again with the rubber mallet on the head. Now I can release her and clean both wound, mine as well as hers with the good brake cleaner...

Dear friends, you might now think, what a creepy story or may be wondering yourselves if I have had too much whiskey oder too much grog! No guys, there is a reason why I am telling you this nonsense.

No one will in fact trust himself doing this kind of operation, specially with his wife... Why do we then have dentist?!

The moral of my fascinating story, is that there are people out there who have studied and are specialised in different fields. So why not letting the specialists doing their job and we are asured that our lovely is in good hands instead of doing ourselves any experiment on our favourite piece of chocolate.

Apropos chocolate, my wife is doing well. She just came from her appointment at the dentist and just informed me that we will have coffee and a nice chocolate pie later than usual as she can't chew for the next 2 hours!

Voilà dear friends, life is so beautiful. Let us enjoy it. Cheers, au revoir and best wishes for the New Year!

Ansgar Oberdij

360° panorama viewer for various articles.

Article overview

We have inserted a 360° panorama viewer for some items on our website permitting you having a perspective of some spare parts from every possible angle. It does not matter if you are searching the parts through the heading

Some major innovations have been introduced in the 360° viewer for a more clarity and an optimized navigation (two new icons). Next to the photo icon, you will find the 360° viewer-icon. Moreover, some more photos have been added to some items in detailed view. Just try it and we hope that you could have found the right item which you are looking for.

www.franzose.com

360° viewer

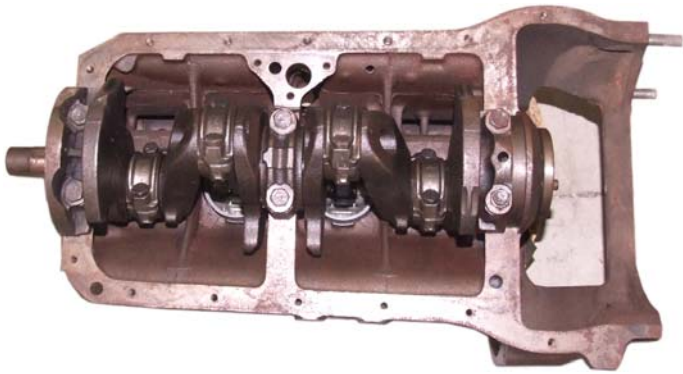

After having clicked on the icon 360°, a new window will pop up (layer), you just need to hit the button play to start the 360° rotation. You can analyse different position of the item via the arrow key (right or left direction).

You also have the possibility to examine the finest details on the item through the magnifier while clicking on the icon (blue outlined arrow) on the left corner. The picture is now on the magnifier modus and you can analyse each angle of the item to the nearest millimeter while holding the computer mouse and moving here and there. While clicking on the rotation symbol (circle with the arrow), the magnifier modus will be closed. Otherwise, you can simply hit the button X (top right) or hit the button ESC on the keyboard. The ESC key is on the top left on the keyboard.

We hope that you will enjoy using our 360° viewer and trust that this new feature will please you.

Used part deposit, what's that?

A lot of spare parts are no longer completely new fabricated. So special companies take back used parts to disassemble them. This single parts are going to be cleaned and lacquered, all flexible parts and pistons going to be renewed. After assemble them again, the parts are as good as new again. However, we don't have so much used parts as we need and that is why we work with "used part deposit".

For example: A distributor sends us a renewed brake calliper. Excepting the base price, we have to pay 50 Euro used part deposit for this part.

If we send back a suitable brake calliper, the distributor repays the 50 Euro.

We are also using this method: If you buy a spare part which is afflicted with used part deposit, you have to pay the selling price and the deposit. By sending back the replaced old part, you'll get back the deposit (just if the old part is qualified for an overhauling).

A normal working day in the shipping department...

A motivated and hard-working team packs your parcel for your lovely car.

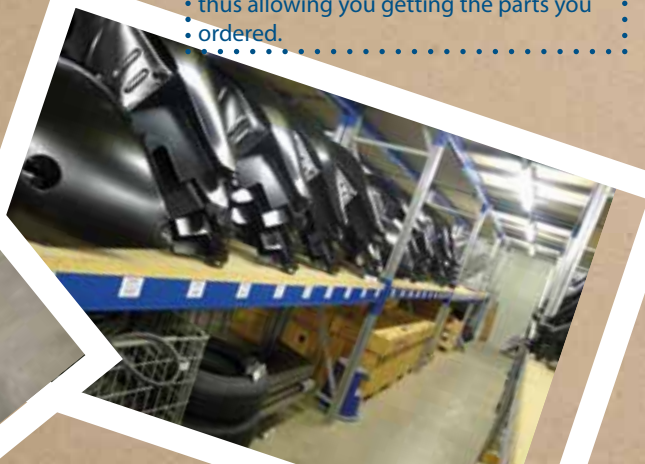

Ruth starts quite early printing all orders which have to be picked.

The bulky parts are being transported via the good's lift!

7:30 am - The staff is busy running through the warehouse of 3 floors, going up and down the whole day, picking the ordered parts from the shelves. They are merely being orientated by a computerised system, directing them via the shortest path. They are equipped with a hand-held scanner which is synchronized via a bar code on each invoice. The scanner guides them to the storage location of the parts mentioned on the invoice thus allowing you getting the parts you ordered.

8:00 am: The first orders have been picked and forwarded to the conveyor belt. The parts are then being packed and sent to the dispatching department still on the conveyor belt.

15:00 – While the DHL-Truck is only a mile away, the last parcels are being stowed on the container. Your parcel which you are eagerly waiting for, is now on the way to your place. You then receive an Email including the dispatching information, allowing you to track the parcel.

It will be a pleasure to prepare your order !

„Der Franzose“ 28 years of success – The chronicle

1988 – 25 years ago

The architect, Rainer Braunwald established „Den Entenmacher“ (The 2CV Maker). At that time, the 2 CV was still being built and seemed to be more interesting than the new coming cars. As the cabriolets were not yet been detected on the market, so that's how emerged the idea of developing and selling a conversion set for the 2CV. After loads of difficulties, the conversion kit has finally been approved. Number of customer in 1988: One!

1989

The kit has been approved. The first brochure was copied and cut manually. Three kits have been sold with an annual turnover of 5000 marks.

1990

The „Entenmacher“ keeps on growing, developing the wide mudguards, the wheel rims as well as the exhaust pipes. The cabriolet was fitted with 295/15 tyres at the rear axle. Annual turnover: 18,500 marks

1991

The first catalogue has been printed including a variety of tuning accessories for the 2CV. Number of customers: 40. Turnover: 50,000 marks.

1992

More than 150 clients have been acquired. The number of spare parts keep on expanding, gear box, sports shock absorber, repair sheets. Purchase of new 2CV from Belgium. It seemed that only Germans were still interested in buying those 2CV which no one else wanted. Up to now, the „Entenmacher“ has done only deficit.

1993 – vor 20 Jahren

Ansgar and Stephanie Olberding took over the „Entenmacher“ at a purchase price of 13,000 Marks. They then moved to an old farmer's house using a garage as warehouse for all the spare parts.

1994

Repositioning the company, putting more emphasis on selling more spare parts und accessories and less tuning. Next move: a former hen-house is being used as warehouse and opening of a garage to offer a better service to the clients. Annual turnover: 120,000 marks

1995

Smoothly getting to normal business offering more possibilities maintaining cars and for the first time, the team restored a 2CV. However the

sales average of repairs kits decreased. Through the acquisition of the company H&D Automobiltechnik, which developed and managed the Lomax since 1992, the „Entenmacher“ re-names himself as „Der Franzose Automobiltechnik“. A shop is also being opened in an old packing building which was not comfortable at all, with no heating. Although the turnover keeps on rising up and reached 200,000 marks, still there was not even 500 marks profit though the team worked 14 hours, 6 days per week.

1996

Next move to a new hall of 180 sqm in Vechta situated in the north of Germany. The building is much better furnished including a heater. Through the publicity via press reports on TV as well as magazines for the Lomax, „Der Franzose“ become much famous. The first part-time basis staff has been employed and the first website is online. Annual turnover: 400,000 marks.

1997

More and more spare parts are being offered but even though, there is no sign of profit even with 60 till 70 hours of work weekly. Ansgar Olberding built a special dolly for a film enterprise which contributes to more publicity. Annual turnover: 500,000 marks

1998

The catalogue contains more than 500 miscellaneous spare parts and a new kit for the pick-up is launched though the majority of the demands are for original 2CV parts. The highlight of the year was the production of the galvanized chassis after long-lasting controls by the Technical university of Hamburg. The company Stanitech in Vechta takes over the production of the chassis.

1999

„Der Franzose“ is being tested, approved and certified by the TÜV as well as the chassis also approved by Citroën. Meanwhile, the selections of parts keep on expanding with 600 different spare parts in the port-folio. The first 100 chassis have been sold and there was not enough time to take care of the garage. Therefore the garage has been closed to be able to put more emphasis on selling parts. The first finished website is being launched. Annual turnover: 1.000,000 marks.

2000

The new millenium starts still with a successful enterprise with more and more parts and new employees joined the team..

„Der Franzose“ 28 years of success – The chronicle

2001

„Der Franzose“ has a variety of 1000 spare parts in the port-folio.

2002

In Paris, Citroën selects the project of the architect Manuelle Gautrand for his building C42 on the Champs-Élysées. In Germany, Der Franzose Automobiltechnik decides to build a new hall on a surface area of 400 sqm in Vechta, Osloer Strasse.

2003 – 10 years ago

The whole team moves to the new building.

2004

The annual turnover reaches over one million Euro.

2005

The selection of spare parts keeps on growing and the building has to be enlarged for storing all those parts as well as the printed catalogue. So the company decides to buy the property next to the new building with a surface area of 450 sqm. The first male colleague joins the team and the first Citroën DS catalogue is being released, in printed as well as download version in german as well as in english. Annual turnover: 1,3 millions Euro

2006

Move in the new building and 4000 different spare parts in the product range.

2007

A new logistic software is being introduced. The surface area for storing the parts is also been enlarged through the introduction of pallet racks.

2008

Publication of the Renault and Peugeot catalogues and addition of a surface area of 350sqm for more storage. Germany - A new rule has been introduced to the traffic regulation to slow down the pollution of the environment. Thus only vehicles with the authorized fine particles stickers are allowed to drive through different cities which are officially registered under the environmental zones. Vehicles which are older than 30 years old are thus not allowed in those zones. „Der Franzose“ thus developed the regulated catalyst for the 2CV, thus allowing those vehicles getting the fine particle stickers.

2009

More than 700 catalysts have been sold. The introduction of the new logistic software allows a better administration of storing over 10,000 parts in the warehouse.

2010

An original french joins the team and thereby permits the establishment of the branch CIPERE in Paris. A new

warehouse of 3 floors is under construction in Vechta. After the success with the catalyst for the 2CV, the catalyst for R4, R5 and R11 is being introduced. Annual turnover: 3,4 millions Euro with an export ratio of 35%.

2011

At the 19th World Meeting of the 2CV friends in Salbris, around 8000 2CV were expected and „Der Franzose“ distributes over 6000 catalogues within three days. The highlight of the year was the award as Top-Rating entreprise to „Der Franzose“ from the rating agency Hoppenstedt, which only 3,4% of all enterprises managed. Number of clients:30,000 with an annual turnover of 4 millions Euro.

2012

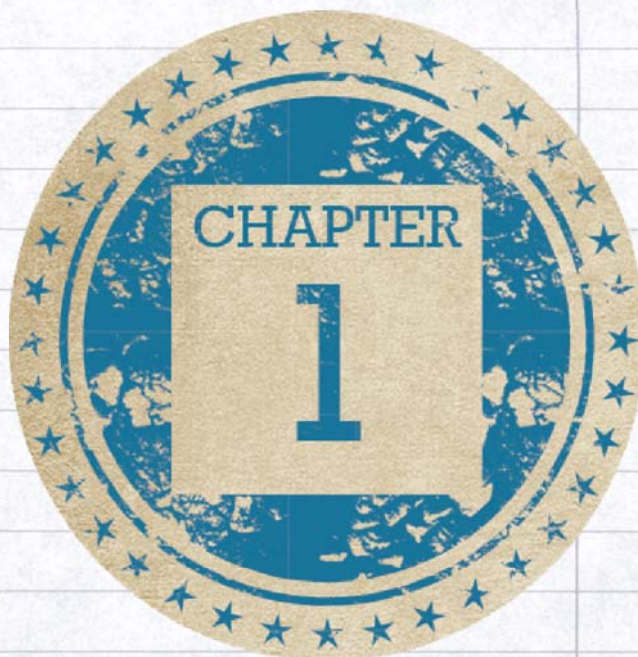

„Der Franzose“ has 32,000 customers worldwide, spread in more than 65 different countries. 42,000 parcels are being dispatched and 18,000 catalogues are being distributed. An off-premises warehouse with 800 sqm is being rented. The international team consists of 20 employees, speaking english, french, german, italian, spanish, creol and turkish. The 5000th 2CV chassis is being sold and once again Der Franzose Automobiltechnik is being awarded as Top-Rating enterprise. Annual turnover: 4,8 millions Euro with an export ratio of 55%.

2013 – 25 years later

„Der Franzose“ delivers parcels over 80 countries worldwide. Over one million spare parts, 18,000 different references are being stored in various stores therefrom 25% of those parts are being dispatched in 12,000 parcels to France. The logistic software is being completely configured. The 2500th regulated catalyst is being sold at the beginning of July and Der Franzose is certified as Top-Rating entreprise for the third time. 2 more employees join the team. Through the financial crisis in Europe, Der Franzose purchases 70,000 Peugeot spare parts, off 4,000 original upholsteries. Annual turnover: over 5 millions Euro with an export ratio of 62 %.

2014/2015

Actually, our team consists of 29 employees and over 50,000 parcels are being dispatched worldwide! In Autumn, we took over 4000 ignition lock and door lock from the company Neiman (original producer)! The mystery about all that, is that the company Neiman does not exist since 1983 anymore! Miracle happens on and off.

Oil - Now, it's gonna be greasily complicated...

Most people think that oil change is very simple - buying the oil at the filling station and fill it??

It sounds very easy but for vintage vehicles, the modern oil is not really the optimal one for the motor. The new modern oil are thin fluid and contain much more cleaning additives which can ruin your motor.

Nowadays, the interval of oil change in modern cars with 50,000 km, is not an unusual condition. The modern oil has to be very thin to avoid that the filtration run smoothly, preventing sludge deposits and suits also vehicles with short distances. Whereas for vintage cars, oil change is done most of the time at specific season of the year! Oil is being renewed few weeks before the „hibernation“!

Vehicles like H-Van, Traction Avant, 2CV (until 2CV4) as well as many other vintage cars do not even have an oil filter. The impurities are set down in the oil pan and is being flushed out at the next oil change. That's exactly how it shall work! With the modern oil, it is the contrary which happens. The oil dissolved the impurities and pumped it again in the oil circulation. And this is wrong! Moreover, the material of the motor gasket of our vintage does not tolerate the chemical additives in the modern oil. Oil seals and rubber seal get harder through the additives and do not seal up correctly. Cork seal get eroded and does not absorb any oil anymore and thus the motor leaks.

Just imagine, you take a plate full of noodle. On the lower part of the plate, you have 3 holes, pour some good olive oil upon the noodle. You can see how the noodle absorb that oil and underneath the plate, there is no trace of oil.

Now pour some soft drinks on the noodle. A pure chemical drink... now you can see that the soft drink does not get stick to the noodle and even wash out the good oil and the whole fluid are to be found on the plate and drop out slowly through the small holes in the plate!

Dear friends of vintage cars, this example with the noodle and the oil, is in fact a figurative one showing you what happens with your motor when you are using the modern high-tech synthetic oil.

So please hands off from all those modern synthetic oil.

Last but not least - our tip: the optimal oil for Citroen 2CV, DS, Traction und H-Van is 20W50. Even Renault R4, R5, R16, all rear-mounted engines (except Alpine) and all Peugeot like 203, 404, 204, 304, 404 und 504 are „grateful“ if the motor is being filled with 20W50!

Mountings

The engine and gearbox mountings serve the purpose to absorb the vibes from the engine. The rubbers of this mountings mature very fast and become too flexible so the vibes can't be absorbed any longer. So if your car hums loudly or accelerating makes strange noises, you should check the engine and gearbox mountings. Maybe they are defect. Replacing this parts often works wonders.

Oil Pressure

After a winter break please pull the plus cable out of the ignition coil .

Then let the engine turn a little while until it build up oil pressure (the oil pressure light disappears). Only now start the engine, your car will be grateful for this.

Engine oil

Engine oil is very important for the engine. However the best oil is not also the best for your car. Especially in vintage cars other seals and fittings are obstructed. Modern engine oil (synthetic oils) implies a lot of cleaning additions and they can destroy the seals. Furthermore, these engines oils have a low viscosity, so the oil fog cannot cling to the bearing shells.

That means, every time you start the car, the engine runs a short time without oil.

So always use normal oil or even better, use special vintage car oil.

It's better for the engine to change the oil more often instead of using high-tech oils.

Ethanol fuel

new technology, new problem!

Ethanol fuel: new technology, new problem!

We are all delighted with the new achievements via the modern technology. However with the introduction of the E10 blend, much more trouble are being caused. The bio-ethanol fuel mixture is a highly concentrated dissolver which might cause some leakage issues to your engine, specially the seals and the fuel pipes. The ethanol causes serious corrosion. Moreover, recent engines have a sealed fuel system in contrast to vintage cars which have a good bleeding fuel system. This additional corrosion arises in the bleeding fuel system as ethanol is hygroscopic i.e it attracts moisture particles from the air. Simultaneously, this trouble is intensified through the acetic and formic acid which are being emerged by ageing fuel, specially for long service life vehicles.

Before the introduction of the catalyst, the additives in particular phosphate avoid causing corrosion. However as the phosphate also damaged the pollutant filter, this has thus been replaced by other resources. Nevertheless, through the continuing development in the automotive industry, those additives are no more to be found in fuel. Unleaded fuel from the 90s contained much more anticorrosive coating as fuel from nowadays.

Through the oxygen influence, E5 and E10 fuel are no more stable and decompose after few months. The stabilized additives are then inefficient. Many manufacturers can no more guarantee a durability of 60 days. After this period, the fuel starts to decompose and has a bad smell.

We then have to handle this corrosion issue ourselves. But how shall we manage it, when ethanol is being included everywhere?

The best solution to avoid further corrosion is to keep the tank full. After a long winter break, it is important to empty the tank as well as the fuel pump and the carburetor. Please do yourself a favour, use only fuel without bio-ethanol.

Based on our knowledge, only Aral (ultimate 102 octane) and Shell (V-Power 100 octane) can guarantee that those fuel are not being mixed with bio-ethanol.

Since three years, we are ourselves experimenting with the Liqui Molly petrol-stabilisator which is ideal for vehicles with low annual mileage and which can also be used after a winter break. When immobilizing your vehicle, please fill in the required petrol-stabilisator quantity into the fuel tank and let the engine run during 10 minutes. We only get good feedback about that indeed without guarantee. Anyway, we can only recommend it to you.

A helpful hint for you guys: we also use the good petrol for our own engines which we rarely used, like lawnmowers, chain saw, tractor etc... and amazingly, we can start the engine immediately even after a long winter break!

No need to save for a full tank to get higher expenses later on!

Pre-ignition

The cylinders in the engine are powered firstly by the starter engine. A cylinder is nothing else than a case in which a piston moves. Via inlet valve a fuel-air mixture is absorbed by the downward movement. If the piston reaches the bottom dead centre, the inlet valve closes.

Now the piston moves up again and compresses the fuel-air mixture via upward movement. It reaches the top dead centre and the mixture ignites with the aid of the spark plug. An explosion evolves and the gases expand. They push the piston down again.

When the piston reaches the top dead centre, the explosion should unfold it highest force.

However, it lasts a moment until the spark plug can ignite the fuel-air mixture.

So the piston is already on the way back down when the gases expand and imply pressure.

That's why pre-ignition adjustment exists.

Generally the spark plug ignites about at 8° before the piston reaches the top dead centre (by idle-running speed).

So if the engine has to work faster, the ignition point has to be advanced (maybe at 20°).

But the ignition should also not happen too early. The consequence would be a power loss and later a engine damage too. We also talk about engine knocking in that case.

Bosch, ignition contact system Bosch. The contact is push on against the clockwise direction. Suitable for Citroën DS21 IE, starting from year of construction 10/1971. Peugeot 204, 304, 404, 504. Renault R4 0,8l. Renault R5 1,3L. Renault R12 + Talbot

The driving shafts

A driving shaft transmits the rotator force of the gearbox to the wheels. Because of settling the suspensions, the driving shafts are variable in their length. If the car is conducted with front wheel drive, the driving shaft has to be flexible in the joints. These joints are protected by collars. So it is very important that these collars are always intact. If not and dirt gets into the joints, they will wear very fast.

A driving shaft rotates several thousand times per minute.

Generally we talk about hydraulic brakes. But what's that?

It means, that the brake in the car works with a brake fluid which flows in a closed line system. This brake fluid can't be compressed, the volume is always constant. The four wheel brakes are linked with the main brake cylinder (is like the engine: a cylinder is a case in which a piston moves).

If you pedal the brake pedal, the brake fluid flows trough the brake lines to the wheel brake cylinders. The brake fluid pressures the piston out of the wheel brake cylinders. And thereby the pistons bears against the brake linings. The brake linings rub against the brake drums which are attached with the wheels.

Now you brake!

If you take your foot off the brake, the brake fluid can return to the main brake cylinder.

The wheel brake cylinder pistons can turn back to the initial situation.

The brake is free.

GENERAL SALES TERMS AND CONDITIONS Der Franzose Automobiltechnik GmbH (below „seller“ mentioned“)

§ 1 General – Scope of application

(1) Our Sales Terms and Conditions shall apply in any case. Other Sales Terms and Conditions shall not apply, unless expressly agreed in writing. Our Sales Terms and Conditions shall also apply even if we know that the Buyer's conditions are differing from our General Sales Terms and Conditions. <https://www.franzose.de/en/CMS/AGB/>

(2) For traders, for legal persons of public law or public-law special property as defined under § 310 paragraph 1. BGB our Sales Terms and Conditions shall also unrestricted apply.

§ 2 Offer and contract conclusion

(2.1) Online orders

(2.1.1) The product description in the seller's online shop do not constitute any firm offer from the Seller but merely enables the Buyer to submit a binding submission.

(2.2) The Buyer may submit a submission using the online-shop order form. In this case the customer submits a firm submission to the Seller by clicking the button „order“ after filling in his shopping cart. The transmission of the submission by the Buyer is also possible by postal service, e-mail, fax or phone.

(2.3) The seller may accept customer's proposal within five days:

- sending a written order confirmation to the Buyer by fax or e-mail. The access to the order confirmation is decisive.
- by delivering ordered products to the Buyer. The access to the delivery is decisive.
- requesting the Buyer to pay after ordering.

Provided that several of the aforementioned alternatives occur, the contract will be concluded as soon as one of the aforementioned alternatives firstly occurs. The non-acceptance of customer's submission by the Seller within the given deadline means the refusal of the submission and it releases the buyer of his statement of intent.

(2.4) The period of order acceptance shall start the day after Buyer's submission dispatch and shall end at the end of the fifth day following submission dispatch.

(2.5) The contract's content of the online order form will be recorded by the Seller and shall be sent to the Buyer in written form together with these General Sales Terms and Conditions (for example via e-mail, fax or letter) after the receipt of Buyer's order submission. In addition contract's content will be recorded on the Seller's website. Data record is accessible for the Buyer via the password protected customer account under the condition that he has created a customer account before submitting his order.

(2.6) The Buyer has the opportunity to correct the entered data prior to firm submission transmission via keyboard and mouse function. Beyond prior to submission transmission the entered data will be displayed in a confirmation screen window and can be corrected as well via keyboard and mouse function.

(2.7) English only is contractual language.

(2.8) Order processing and contacting usually take place via e-mail and automated order processing. The customer has to ensure that the email-address he provides during order process is accurate in order to receive e-mails sent to him by the Seller.

Particularly, the Buyer has to ensure that e-mails sent by the Seller or a by third party can be delivered even in case of active SPAM filters.

(3) Orders

(3.1) If the submission is in accordance with § 145 BGB it can be confirmed by us within 2 weeks. The acceptance can also occur via spoken or written declaration, by order confirmation in written form, or order confirmation in text form (email, fax) or by the delivery of the goods.

§ 3 Right of withdrawal

Traders, legal persons of public law and special property as defined under § 310 paragraph 1. BGB have no right of withdrawal.

§ 4 Prices – Terms of payment

(1) Our prices are always ex-work prices exclusive shipping cost and packing charges which are separately shown on the invoice if no special conditions are mentioned on the order confirmation. Shipping cost are invoiced according to the effective „shipping-index. In case of duties and taxes it shall be separately invoiced to the Buyer by the forwarder (for instance DHL).

(2) Our prices include VAT which is invoiced at the official rate of date of invoice and shown separately on the invoice.

Our prices for non-european customers are exclusive VAT as soon as the Buyer communicates his non-eu-

ropean address. If the non-european Buyer picks up the goods at Seller's head office he will have to pay the effective VAT. The paid VAT will not be refunded by the Seller even not after the exportation to the non european country.

(3) Discount may not be deducted without previous written agreement.

(4) If no special term of payment is mentioned in the order confirmation the total amount has to be paid without deduction within 10 days after date of invoice. Regarding overdue payment legal provisions shall apply.

§ 5 - Place of juruduction - Place of excution

(1) If the Buyer is trader the place of jurisdiction is our place of business; but we are also authorized to take him to the court of his place of residence.

(2) German legislation shall be applied; the application of UN-Sales Convention is excluded.

(3) Except contrary mention on the order confirmation our place of business is place of excution.

§ 5 Set-off interdiction – Right of retention

Set-off is only allowed to the Buyer if his counterclaims are legally stated, uncontested and approved by us. Furthermore the Buyer is allowed to apply his right of retention if his counterclaim is based on the same contract relation.

§ 6 Delivery time – Responsibility in case of delivery delay

(1) The beginning of the delivery time which we confirmed implies that all possible technical questions have been cleared.

(2) The compliance of our delivery obligation implies the accurate implementation of Buyer's obligations in due time. We reserve ourself the right of objection for non-complied contract.

(3) In case of default of acceptance or non-implementation of any obligation by the Buyer, we are authorized to claim a compensation for the caused damages and for the possible additional expenditures. All rights for further pretensions reserved.

(4) Provided that the conditions written in § 3 are existent, the risk of a casual damage or the risk of a casual deterioration of object of purchase is carried by the Buyer as soon as the payment or the acceptance of the delivery has been delayed.

(5) We are responsible under legal provisions as far as the fundamental contract is a time deal. We are also responsible under legal provisions if the Buyer, following to a delayed delivery due to the Seller, declares that he is no more interested in further fulfillment of contract.

(6) We are also responsible under legal provisions as far as the delivery delay is due to intentional or grossly negligent breach of one of our obligations; we also responsible under legal provisions for the possible negligence of our representatives or auxiliary persons. As far as the delivery delay is not due to an intentional or grossly negligent breach of contract from our side our responsibility for damage indemnity is strictly limited to the foreseeable and concrete damage.

(7) We are responsible under legal provisions as far as the delivery delay is due to our intentional or non-negligent breach of contract; in such a case our responsibility for damage indemnity is strictly limited to the foreseeable and concrete damage.

(8) Furthermore if we are responsible for delivery delay we compensate for every complete week 3 % of value of goods, maximum 15 % of value of goods, according to a standart delivery delay all-in indemnity.

(9) All rights for further pretensions reserved.

§ 7 Collection by the customer

As far as a collection of the goods by the Buyer has been agreed no shipping cost will be invoiced. The Buyer has to collect the goods at the buyer's place of business after arrangement. The Seller has to inform the Buyer by Email that the goods can be collected.

§ 8 Transfer of risk - Packing charges

(1) Our prices are always ex-work prices if no special conditions are mentioned on the order confirmation.

(2) Packaging will not be withdrawn except pallets. The Buyer has to dispose of packages at his own's expense.

(3) Deliveries are always insured. Corresponding cost are borne by the Buyer.

§ 9 Warranty for defects – Limitation of liability in time

(1) Warranty claims from the Buyer implies that he duly complied with his obligation of investigation and approval (§ 377 HGB)

(2) Warranty claims prescribe 12 months after the date

of delivery to the Buyer's. In case of claim for compensation following to intentional or non-negligent damage of the user or in case injury to life, bodily injury or injury to health, legal provisions shall be applied.

(3) If the object of purchase shows a defect that already existed at the time of transfer of risk, despite all dedicated carefulness, subject to claim in due time, we shall either correct or replace the concerned product. The time limit for correction given to us should be appropriate (at least 2 weeks). Right of recourse will not be affected by above mentioned rule.

(4) If supplementary performance fails the Buyer may withdraw from the contract or reduce his pay, regardless of possible damage compensation pretensions.

(5) Damage compensation pretensions are not receivable in case of insignificantly deviations from the agreed configuration, from usability, or in case of natural abrasion or wastage, or defective fitting and also in case of damages occurring after the transfer of risk and due to wrong or negligent handling, or excessive strain, unsuitable utilities or defective fitting. In case of improperly repair work or modifications made by the Buyer or by a third party damage compensation pretensions are excluded as per for the outcome of these acts.

(6) Claims from the Buyer regarding the necessary charges for correction, in particular transportation charges, travel charges, labour costs and material cost are excluded. If the product delivered by us has been retroactively brought to another place than the Buyer's place of business, except the movement is due to the conventional usage of the product.

(7) The Buyer's right of recourse against us only exists if the Buyer has not concluded with his consumer any agreement about exceeding the legal provisions of warranty claims. Regarding the range of buyer's right of recourse, § 6 shall apply.

§ 10 Used parts and NOS parts – Responsibility

Defect liability for traders.

(1) For used parts defect liability is limited to one year. After one year any claim will be rejected. Deceit and fraudulent claims odr defects or pretensions regarding defect liability assumed by us for one product are excluded from this rule.

(2) For used parts liability is limited to one year. After one year any claim will be rejected. For reconditioned parts liability is limited to one year. After one year any claim will be rejected. Reconditioned parts are used parts which have been optically and technically worked off or repaired.

§ 11 Joint liability

(1) A larger compensation responsibility as per § 9 and § 10 without consideration of the legal nature of claim is excluded. This particularly applies to claims based on fault at contract conclusion, following to any violation of obligations or any culpable damage compensation claim under § 823 BGB.

(2) The exclusion or restriction of our responsibility shall apply to our employees, workers, collaborators, representatives and auxiliary employees as far as their personal responsibility is concerned.

§ 12 Title retention

(1) We reserve ourselves the right of retention for the object of purchase till all payments for contract are received.

In case of contract violation by the Buyer, particularly in case of overdue payment we are authorized to take the object of purchase back. Withdrawal does not mean contract cancellation. Except explicit declaration in written form. The seizure of the object of purchase always means our withdrawal from the contract. After the seizure we are authorized to sell the object of purchase. The commercial benefit less commercial costs should be deducted from the amount of Buyer's commitment.

(2) The Buyer is obliged to care for the object of purchase; particularly he is obliged to ensure the contractual object at its original value against damage by fire, water and theft at his own expense. If any maintenance or service work is necessary the buyer has to perform it at his own expense.

(3) In case of distraint or any intervention by a third party the Buyer must inform us immediately so that we can take legal action under § 771 ZPO. If the third party is not able to refund court and extrajudicial costs as per § 771 ZPO the Buyer will assume the caused loss.

§ 13 - Place of juruduction - Place of excution

(1) If the Buyer is trader the place of jurisdiction is our place of business; but we are also authorized to take him to the court of his place of residence.

(2) German legislation shall be applied; the application of UN-Sales Convention is excluded.

(3) Except contrary mention on the order confirmation our place of business is place of excution.

Renault 4

The Renault 4, also known as the 4L (pronounced „Quatrelle“), is a hatchback economy car produced by the French automaker Renault between 1961 and 1992. It was the first front-wheel drive family car produced by Renault.

The car was launched at a time when several decades of economic stagnation were giving way to growing prosperity and surging car ownership in France. The first million cars were produced by 1 February 1966, less than four and a half years after launch; eventually over eight million were built, making the Renault 4 a commercial success because of the timing of its introduction and the merits of its design. It was exceptionally spacious for its size, and although originally marketed as a small estate car, it is now regarded as the first mass-production hatchback car.

Origins and strategy

The Renault 4 was Renault's response to the 1948 Citroën 2CV. Renault was able to review the advantages and disadvantages of the 2CV design and come up with a larger, more urban vehicle. In early 1956, Renault Chairman Pierre Dreyfus launched this new project: designing a new model to replace the rear engine 4CV that would become an everyman's car, capable of satisfying the needs of most consumers. It would be a family car, a woman's car, a farmer's car, or a city car

Launch of the R3 and R4

Renault launched the Renault 3 and the Renault 4 simultaneously in July 1961. The cars shared the same body and most mechanical components, but the R3 was

powered by a 603 cc version of the engine while the R4 featured a 747 cc engine. This placed the R3 in the 3CV taxation class while the R4 was in the 4CV class. Actual maximum power output was claimed by Renault as 22.5 hp for the R3, and 26.5 or 32 hp for the R4, depending on price level and the type of carburettor fitted. Initially the base versions of the R3 and R4 came with a thick C-pillar behind each of the rear doors. Quarter glass was a 400 francs option for the basic R4. The extra visibility increased the weight of the vehicle, but these windows soon became standard for all R4s

The R3 and R4 were targeted at the Citroen 2CV that employed soft springs and long wheel travel to absorb bumps on poorly maintained roads. The Renault 3 & 4 applied the same approach and two models appeared at the Paris Motor Show in 1961 on a specialized demonstration display that incorporated an irregular rolling road. Visitors could sit inside car, which remained undisturbed while the suspension absorbed the erratic bumps of the rolling road. In 1962, Renault employed the same display at the Turin Motor Show.

The basic version of the R3 was priced 40 francs below the lowest priced version of the Citroen 2CV in 1961 and featured painted bumpers and grill, a simplified

instrument panel, a single sun visor, no windshield washer, and no interior door panels. This trim was also offered in the more powerful R4. The R4L with six side windows, chrome coloured bumper and grill, as well as a less spartan interior cost 400 francs (roughly 8%) more than the R4 with its four side windows. Similar as the Renault 4CV "Service" in 1953, customers shunned the basic model and in October 1962, the Renault R3 was discontinued, along with the most basic version of the Renault 4.

A „super“ version (branded „de luxe“ in some export markets) with opening rear quarter-light windows and extra trim was also offered. The de luxe and super versions of the R4L received a version of the engine from the Renault Dauphine giving them a four-cylinder engine capacity of 845 cc. After the withdrawal of the 603 cc engine R3, the 747 cc R4 model continued to be listed with an entry level recommended retail price, but the slightly larger-engined L versions were more popular. By 1965, Renault had removed the extra „R“ from their model names: the Renault R4L had become the Renault 4L.

Transmission

The initial transmission was a three-speed manual, described by one critic as an obsolete feature when compared to the four-speed manual of the then thirteen-year-old Citroën 2CV. Ironically the new Renault 4 did not inherit its transmission from the Renault 4CV nor from anyone else: the transmission was newly developed for the car. The dash-mounted gear lever was linked via a straight horizontal rod that passed over the longi-

tudinally mounted engine and clutch directly to the gearbox right at the front. The resulting absence of any linkage at floor level permitted a flat floor across the full width of the car's cabin. Synchromesh featured only on the top two ratios, even though the low power of the engine required frequent gear changes by any driver using normal roads and wishing to make reasonable progress. On this point Renault quickly acknowledged their error and cars produced from 1962 featured synchromesh on all three ratios. In 1968 the Renault 4 finally received a four-speed transmission.

Structure and running gear

The three principal new models introduced by Renault since the war had all featured monocoque „chassisless“ construction which was believed to save cost in the manufacturing process and to cut running costs by reducing vehicle weight. The Renault R3/R4 design defied this by now widely accepted mantra, employing a separate platform to which the body shell was then attached. The body's structural role in maintaining the overall rigidity of the car body was thereby reduced, placing less stress on the roof and allowing for thinner window pillars. Although the use made of a separate platform resembled, in some respects, the use that pre-war designs would have made of a chassis, the outcome was a structure described as semi-monocoque, and it would later allow Renault to use the R4 platform, with very little modification, to build new models such as the Renault 6 and Rodeo. (Later, the successful Renault 5 used the R4 running gear but in a monocoque shell).

Suspension

The R3 and R4 had four-wheel torsion-bar independent suspension. This was an innovation which would be copied on a succession of subsequent front-engined Renaults introduced during the 1960s and 70s.

The car features a shorter wheelbase on the left than on the right because the rear wheels are not mounted directly opposite one another. This concept allowed a very simple design of the rear suspension using transverse torsion bars located one behind the other without affecting handling. The front torsion bars were longitudinal. Dampening was contributed by the provision of hydraulic telescopic shock absorbers on all four wheels. Those at the rear were mounted virtually horizontally which avoided the intrusion of rear suspension componentry into the flat floored passenger cabin.

The longitudinal layout of the front-wheel drive engine and transmission with engine behind the front axle, and gearbox/dif-

ferential in front is identical to the Citroën Traction Avant. The suspension is also very similar, the only difference, being the deletion of the Citroën's flexible beam between the rear wheels, to give the Renault 4 fully independent rear suspension. This is ironic as

Louis Renault, the company's founder had been the harshest critic of the Traction at the time of its launch in the 1930s.

Around the world

In Colombia, the car was one of the most sold, and remained in the memory of many Colombians, it was nicknamed „Amigo fiel“ (Faithful friend) and was manufactured in the SOFASA plant in Envigado (a city near Medellín) from 1970 to 1992. Two of the most popular versions included the Master (1,022 cc) and the Líder (Leader), with a more powerful 1,300 cc engine. The first Renault 4 manufactured in Envigado Colombia was called Azul Pastrana, because it was blue and President Misael Pastrana opened the plant.

In Argentina and Chile the 4 van (Fourgonette) is known as „Renoleta“, following the nickname given to the Citroën 2CV van, „Citroneta“. Due to heavy taxation on passenger vehicles in the late 1950s, the first 2CVs were imported unfinished, only up to the front doors and completed with an Argentine-made pickup truck bed. The Spanish word for pickup truck is „camioneta“, hence „Renoleta“.

In Italy the 4 was produced by the Alfa Romeo factory in Milan under license from 1962 to 1964. 41,809 R4s were built there In Australia the car was produced between 1962 and 1966 in Heidelberg, Victoria but ceased production to make way for other models

In Bosnia and Herzegovina and Croatia the car was known as Mali div (Little giant) or „četvorka“ In Finland, the car was known as

Notes

1 Tipparellu (Drop-Rellu) from the
marketing slogan No grease, no
water, just a drop of fuel and as it
had excellent fuel economy. Rellu
is the common nickname for Ren-
2 aut cars in Finland.

3 In Mexico, the Renault 4 was
produced in Ciudad Sahagún, an
industrial city created by DINA
and Renault in the fifties. Renault
production ceased in 1976.

4 In Ireland the car was produced
in a plant established in 1962 in
Naas, and one established in Wex-
ford in 1972, production running
until 1984.

5 In Slovenia (formerly part of
Yugoslavia) the Renault 4, nick-
named „Katrca“ or „čtvorka“
6 (from French quatre, four), was
produced in the Industrija motor-
nih vozil (IMV) plant from 1973
to 1992. 575,960 R4s were built
there. In 1989 the plant was sold
to Group Renault and renamed
7 REVOZ d.d.

8 In Portugal it was known as „Qua-
tro L“ (four L).

9 In Spain the Renault 4L is known
as „Cuatro latas“ (four tins).

10 In Kenya it was sold as the „Ren-
ault Roho“. Roho meaning „heart“
so it was „The Renault with the
big heart“

11 On September 7, 2013 Pope
Francis accepted a white 1984 4L
which had done 300,000 km, offe-
red to him by father Renzo Zocca
from Verona.

Photo-Competition 2016

We are looking for the best, most original, funniest or daring vintage car photo!

Send us the most amazing photo with your vehicle and you have the chance to win:

1st prize Voucher of 300,00 €

2nd prize Voucher of 200,00 €

3rd prize Voucher of 100,00 €

The winning photos will be published in our

Der Franzose- Calendar 2017.

And who knows, ... maybe you will soon be able to tell your friends:

Look, this is my car in this calendar/catalogue.

Motives? Everything you like- everything that's fun.

We look forward to your picture!

To be able to print your picture we ask you to follow a few rules:

Format: please use **landscape format**, the filetype jpg and minimum **300 dpi**.

And of course, some small comments to the picture - when, where, vehicle type, year of building, etc

Thank you
